

A dose of digital automation delivers healthy returns for Sparsh Hospital, now running on SAP Business One®

Before: Gaps in data and systems

- Sparsh Hospital (Orthopaedic) required a robust business management solution to get the most efficiency and results from their team of medical professionals across multiple branches
- Lack of system integration made processing bulk data volumes slow and prone to errors
- The existing laboratory information management system (LIMS) software was not integrated to their enterprise resource planning (ERP) software leading to duplicate data and processes
- Manual reporting was inefficient and not possible in real time

Why SAP and Ikyam Solutions

- With proven implementations for healthcare providers, SAP Business One offered an all-in-one solution, in a platform that was fast to implement, easy to use and within budget
- SAP Silver Partner Ikyam Solutions was selected as they have proven results in healthcare and experience integrating LIMS with ERP using SAP Business One

After: A seamless, integrated workflow

- With one user-friendly platform connecting all branches – and integrating LIMS with ERP, the hospital can centrally manage the business
- Bulk data can now be uploaded and used immediately in transactions
- The elimination of many manual processes has reduced errors and sped up patient processing
- Accurate reporting dashboards are now available in real-time, which enables more effective decision-making
- Improved reporting, communication and turnarounds increase service levels

“SAP Business One delivers us the **excellent integrated solution** we need to efficiently run our organisation.”

Prashant Hegde, Senior Manager, Sparsh Hospital

Real-time

A single source of truth unlocks the ability to create a truly intelligent enterprise and make strategic decisions.

Flexible

A modular and customisable solution, SAP Business One can scale and grow with the hospital long term as things evolve.
