

# Gleason maintains top quality at reduced cost with an end-to-end digital platform running on SAP Business One®

## Before: Disconnected systems causing inefficiencies

- As a leading producer of gear production systems for over 155 years, Gleason is constantly innovating new ways to do business to stay ahead of the competition – technology has always been critical, which is why they recently embarked on a digital transformation
- A lack of a company-wide enterprise resource planning (ERP) system was reducing efficiency
- Legacy materials requirements planning (MRP) systems lacked the latest features
- Stock was not readily traceable, requiring time-consuming manual tracking

## Why SAP and Ikyam Solutions

- Having previous experience with the platform, SAP Business One was selected as it offers a robust system with built in ERP, MRP, inventory, finance, logistics and reporting tools
- Ikyam Solutions was recommended by trusted colleagues, is an SAP Silver Partner and has experience helping manufacturing businesses grow using SAP Business One

## After: Speed and visibility across the supply chain

- Enterprise-wide platform integrating financials and core operations drives efficient management and oversight of the business
- Built-in MRP systems enable efficient management of manufacturing and more cost-effective resourcing, tighter quality control and full accountability for all employees
- Automated inventory control systems help production planning, forecasting and sales
- Centralised systems and databases have enabled full traceability of gears, parts and components to ensure quality control

“SAP Business One and Ikyam Solutions have become **a great business partner** for Gleason Works India.”

Rajashekar M G, Finance Controller,  
Gleason Works India

## Since 1865

Over 155 years of high performance and Gleason is equipped for the next century.
