

Inflow Technologies upgrade their own systems to build an intelligent enterprise with **SAP Business One**[®]

Before: Disjointed legacy platform slowing progress

- While they are experts in helping their own clients make use of the latest technology, Inflow Technologies made the decision to fully upgrade their own enterprise management systems
- They were using multiple systems to record and maintain financials, inventory and other business operations which was inefficient to maintain and required manual processes
- Their goal was to integrate all these disparate systems into one unified platform

Why SAP and Ikyam Solutions

- SAP Business One integrates all core financial and operational processes across all departments to give the business a connected platform to take it into the next phase of growth
- Ikyam Solutions proved to be the ideal implementation partner, as they had several years of proven experience with SAP Business One with a strong functional and technical team

After: Automation and centralisation powers efficiency

- An all-in-one system across the business enables faster information access, accurate real-time reports and full audit control
- Elimination of manual work saves time, reduces errors and allows management to focus more on business and customers
- Centralised database enables real-time reporting dashboards, process automation and performance tracking by department, product or customer
- Inflow Technologies now has the fundamental platforms in place to build long-term strategic growth

“SAP Business One is **excellent technology, delivered with the knowledge and expertise of Ikyam Solutions**. It has streamlined many processes and made us more productive.”

Pradeep Alfred Gomes – IT Manager, Inflow Technologies

360° view

Unified platform enables a real-time view across departments and enterprise-wide.

1 platform

Integrating department and functions under one central platform drives efficiency.
