

# Span Healthcare enjoys a healthier bottom line with a digital transformation powered by **SAP Business One**<sup>®</sup>

## Before: Limited information, flexibility and control

- With 7 offices and 65 specialists offering transfusion and hematology solutions to hundreds of hospitals and blood banks across India, a sophisticated digital solution was needed to grow to the next level
- Existing systems were not integrated, and cross-department communication was ineffective
- Support issues and upgrades were not resolved on time by the previous implementer
- Lack of automated reporting meant there was no real-time data for decision making

## Why SAP and Ikyam Solutions

- SAP Business One offered end-to-end financials and reporting centralised across all locations and departments, unlocking the ability to build a connected and intelligent enterprise
- Span Healthcare selected SAP Silver Partner Ikyam Solutions due to their specialisation in SAP Business One and 6-year track record of successful enterprise resource planning (ERP) implementations

## After: A seamless, integrated workflow

- Company-wide platform integrating financials and core internal operations across the 7 offices drives more efficient management to help unlock the full growth potential
- Inventory management is streamlined with one platform replacing several disconnected systems
- The Span Healthcare team can now access accurate data and analytics on the company's performance in real-time, enabling fast, informed decisions across departments
- Up-to-date data streamlines efficiency and reduces wastage and costs

“SAP Business One has **enhanced operations and provided greater company discipline**. Ikyam Solutions provides responsive support and quick resolution of problems.”

Ravikumar N B, CFO, Span Healthcare Pvt Ltd

## Automated

A shift from manual to automatic processes enables faster delivery at a more consistent quality.

## Centralised

All customer and financial data housed in one location for easy reporting and communication.
